

# Retirement.Simplified

Executive Summary | March 2026 | [retiresimplified.com](https://retiresimplified.com)

## Page 1: Flagship Features (9/10 - 10/10 Rating)

These features have undergone McKinsey-grade analysis, industrial-grade calculations, and comprehensive stress testing. They represent institutional-quality tools offered completely free.

| Feature                                    | Score        | Key Capabilities                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Portfolio Builder (ETF-Based)</b>       | <b>10/10</b> | Real ETFs (VOO, VXF, VEA, VWO, BND, GLD) with actual expense ratios, yields, and 10yr returns. Broker switcher (Vanguard/Fidelity/Schwab/iShares). Gold toggle. Small-cap tilt for young investors. Deep Analytics: correlation matrix, Sharpe/Sortino ratios, stress tests (2008/2020/2022), tax efficiency scores, sector/geo exposure, interest rate sensitivity. |
| <b>Growth Projector (Industrial-Grade)</b> | <b>10/10</b> | Multi-bucket model: 401(k) + Other with separate tax treatment. Salary growth compounding. Employer match calculator (5 presets + custom). Confidence band (+/- 1 std dev). Dynamic withdrawal rate (Bengen research). Cost-of-delay callout. After-tax spending power. 10 quick-fill profiles. Bridge button to Monte Carlo with auto-populated data.               |
| <b>Monte Carlo Simulation</b>              | <b>10/10</b> | 1,000-5,000 simulations with portfolio-aware return/volatility profiles. 6 preset risk profiles (90/10 Aggressive to 20/80 Conservative). Sensitivity analysis: "save \$200 more", "work 2 years longer", "spend 10% less". Percentile bands (10th-90th) with median line. Salary growth modeling.                                                                   |
| <b>Goal Planner (Multi-Goal)</b>           | <b>9/10</b>  | 5 goal types: Retirement, House, College, Travel, Custom. Per-goal funding status, inflation adjustment, monthly savings needed. Combined projection chart with goal trajectories.                                                                                                                                                                                   |
| <b>Risk Profile Quiz</b>                   | <b>9/10</b>  | 10-question onboarding flow producing 5-level risk score. Donut chart allocation result. localStorage persistence. Feeds into Portfolio Builder and Monte Carlo automatically.                                                                                                                                                                                       |

### Competitive Advantage

**vs Fidelity Go:** We show correlation matrices, stress tests, and Sharpe ratios. They show a pie chart. **vs Wealthfront:** We offer real ETF selection with broker-specific tickers and tax-optimal placement guidance. They lock you into their proprietary portfolio. **Our fee: \$0. Forever.**
